PROFILE

Game Development and Interactive Media student at Ontario Tech University with a hybrid background across gameplay programming, technical art, procedural tools and 3D content creation. Experienced in building Unreal Engine 5 systems with C++ and Blueprints, developing advanced FPS gameplay/AI prototypes, creating PCG environment tools and Unreal Editor utilities, and producing game-ready 3D assets. Seeking Technical Artist / Technical Game Development opportunities where art, tools, systems and real-time engine workflows intersect.

TECHNICAL SKILLS

Game Engines & Programming: Unreal Engine 5, C++, Blueprints, Enhanced Input, Unity 2D/3D, C#, Python, gameplay systems, debugging, Git/GitLab

Gameplay & AI: FPS movement/combat, line-trace shooting, recoil, headshots, weapon systems, Behavior Trees, EQS, cover selection, AI pushing/peeking/shooting, navigation, Chaos destruction

Technical Art & Tools: UE5 PCG, Editor Utility Widgets, Editor Modules, procedural environment tools, artist-facing controls, Landscape & spline workflows, LODs, Nanite, collision/UCX, optimization

3D Art & Animation: Blender, Autodesk 3ds Max, hard-surface & polygon modeling, UVs, game-ready asset optimization, Substance Painter, PBR texturing, animation retargeting, IK, engine integration

Additional: Selenium/UI automation, API validation, MySQL, HTML/CSS, Photoshop, Premiere Pro, After Effects, Arduino

EXPERIENCE

Game Art Intern - Unreal Engine / Technical Art | Lakshya Digital | India May 2026 - Aug 2026

- Independently developed an Unreal Engine 5 FPS prototype in C++ and Blueprints, implementing player movement, sprint/crouch/jump, aiming/FOV, weapon switching, recoil, line-trace shooting, hit/headshot logic and combat feedback.
- Built advanced enemy AI using Behavior Trees and EQS: enemies detect and push toward the player, choose nearby cover, reposition, peek from cover and shoot based on environment queries and combat state.
- Integrated gameplay animations, retargeting/IK, visual effects and Chaos destruction for interactive environment objects to create a complete playable combat experience.
- Developed a configurable UE5 PCG ecosystem generator for trees, grass and rocks with terrain projection, slope/height filtering, weighted mesh variation, density/spacing controls, tree relationships, Landscape paint masks and road/spline exclusions.
- Created Unreal Editor tools in Blueprints and C++ for unused-asset scanning, selected asset cleanup and empty-folder detection/removal; also explored LOD, Nanite and collision workflow utilities.

Technical / Automation Intern | Virgin Mobile UAE | Dubai, UAE 3-month internship

- Built Python/Selenium QA automation for broken images, missing content and page-load issues; performed UI automation and API validation.
- Used GitLab workflows and prepared technical reports/presentations to communicate issues, automation findings and results.

SELECTED PROJECTS

Unreal Engine FPS Combat & Advanced AI Prototype | Unreal Engine 5 | C++ | Blueprints | Behavior Trees | EQS

- Built the prototype independently during internship, covering the complete gameplay loop from player controls and weapons to enemy combat behavior, effects and environment interaction.
- Designed cover-based AI that reacts to player visibility, pushes into combat spaces, queries nearby cover through EQS, takes cover, peeks and fires; integrated combat animations and Chaos-enabled destructible props.

Procedural Ecosystem / Biome Generator | Unreal Engine 5.6.1 | PCG | Blueprint

- Created artist-controlled procedural systems for trees, grass and rocks using spline areas, terrain slope/height, candidate spacing, jitter, density, seeds, weighted meshes and per-mesh transform controls.
- Added workflow features such as tree clearance/blending, additive near-tree rock generation, Landscape paint-layer exclusion, road and Landscape-spline exclusion, and reusable PCG subgraphs.

Unreal Asset Cleaner & Optimization Tools | Unreal Engine | C++ | Editor Utility

- Built Content Browser/editor tooling to scan selected folders for used/unused assets, display results, delete selected unused assets and detect/remove empty folders.
- Worked with Unreal Editor APIs and production-oriented utilities for LOD, Nanite and collision setup to reduce repetitive asset-preparation work.

Vector of Fear - Sci-Fi Horror Game | Unity | C# | 3D Art | Animation

- Created game-ready robotic enemies, first-person hand animation and environment assets, then integrated content and gameplay systems into a playable Unity project.
- Received Ubisoft's Best Choice recognition and was showcased at Level Up.

Additional Unity Game Projects | Unity | C#

- Built action-combat and stealth prototypes featuring player systems, enemy logic, combat, save/progression mechanics, UI and level-based gameplay.

EDUCATION

B.IT - Game Development and Interactive Media | Ontario Tech University | Ontario, Canada 2024 - Present

- GPA: 3.86 | Focus areas include game programming, 3D art, animation, interactive systems and real-time engine integration.

CBSE Senior Secondary Certificate 2024

CBSE Secondary School Certificate 2022

ADDITIONAL TRAINING & CERTIFICATIONS

MAAC India: Autodesk 3ds Max, Adobe Photoshop, Premiere Pro & After Effects; 3D modeling, UVs, texturing, rendering, motion graphics and video editing.

Other: Unity Game Development (2016 & 2024), Python Programming, Web Development, Robotics & Arduino, Drone Operations, 3D Printing.
